

P.Referencer

Quick Start Guide

E

CASIO®

Introduction

P.Referencer is a PV Application for displaying database data on your PV Unit. You can view data files created using Easy Referencer Tool for PV software on a Windows PC.

Installation

You need PV Applications Manager in order to install P.Referencer on your PV Unit, and to transfer data files to your PV Unit from your computer. If PV Applications Manager is not on the CD-ROM that came bundled with your PV Unit, visit one of the Websites noted below to download a copy.

For information about how to use PV Applications Manager, see the User's Guide that accompanies it.

Note

Where you should go on the Internet to download PV Applications Manager depends on your PV Unit model number.

- If you have a PV-S400Plus or PV-S600Plus, go to:
<http://www.casio.com/pvdownload/>
- If you have a model other than the two indicated above, go to:
<http://world.casio.com/download/pv/>

To install P.Referencer, use PV Applications Manager to install the Referencer.bin file on your PV Unit.

To transfer a data file from your PC to your PV Unit, use PV Applications Manager to transfer files whose names have the extension "ADT". You can create an ADT file using Easy Referencer Tool for PV.

Using P.Referencer

- On the PV Unit icon menu, tap the P.Referencer icon to start the application and display a search input screen.
- To search for data, first select the database name on the menu of the search input screen. Next, input the initial characters of the headword you want to find and then tap **Exe**. This displays a list of headwords that contain the characters you input, or the headword that is alphabetically nearest the characters you input.
- Tapping **Exe** without inputting anything on the search input screen displays a list of all the headwords in the database, starting from the first headword.
- Tapping a headword displays its data screen. Tapping **List** on the data screen returns to the headword screen.
- Underlined terms on a data screen are also headwords in the database. Tapping an underlined term jumps to the data screen for that term. To jump back from the data screen of an underlined term, tap **Esc**.
- A dotted line under a term on a data screen means that there is extra information available for that term. Tapping the term displays a dialog box with the extra information. To close an extra information dialog box, tap **Esc**.
